Reusable Sharps Management Makes Sense

A onsite Trilogy Sharps technician monitors and exchanges filled reusable sharps containers at the point of generation throughout your healthcare facility. This optimizes patient care by eliminating the need for critical staff to spend time changing out containers.

Our technician collects the filled containers on custom mobile racks, the racks are securely transported to our permitted treatment facility and every container is mechanically emptied and then sanitized for reuse.

Outsourcing this task increases safety by reducing exposure incidents caused by sharps injuries. Utilizing reusable sharps containers is environmentally friendly because it can be used hundreds of times and also eliminates time spent ordering and monitoring container inventory.

Reusable Container Options:

Containers are designed to accommodate single handed disposal and the transparent containers make it easier to monitor container capacity and optimize storage.
